API also provides an explicit API to automate functionalities, such as the library to write basic applications in Visual Basic for Applications. AutoCAD Product Key can use a concept of standards, by which it is referred as "standards-based drawing system". It uses a language called "Standard Definition Language" (SDL) to communicate between applications. SDL is almost entirely data-driven and communicates through a means of access called "language bindings". Views AutoCAD has a feature called views which is used to show different perspective of a drawing. Views in AutoCAD 2010 can be defined in the Drawing Settings using menu: View / Views / New View or using context menu

on the right side of the drawing window. There are three ways to switch between views: Single view: View can be defined to be single (called only by default). When user enters to the drawing, the single view is the default view. You can also choose to automatically switch to the view of the last drawing when you open a drawing. Switching view can be done by the right click context menu. Zoomed view: This is the default view. The view can be defined to be zoomed (shown in big or small). Double clicking the view name in the drawing will switch to the view zoomed, and vice versa. Extents view: When a view is defined to be "extents", the view automatically displays a grey square of the view extents, and the view name is displayed at the top right corner of the drawing window. This view can be shown or hidden by clicking the menu View / Views / Set View to Extents, or by right clicking a view and choosing 'Hide' or 'Show' from the context menu. When a drawing is opened in AutoCAD, the file is scanned for views. If any view exists in the drawing, it is used to set the current view. If no view is defined for the file, the single view is used by default. User Interface (UI) UI defines the look and feel of the drawing window. It can be changed by right clicking the drawing window's title bar and choosing 'Change UI Settings' from the context menu. There are 4 areas of the UI which can be customized: The
