According to what we already found regarding this file, it is a 'fake' installer for the game, we cannot find the crack file inside just a '.exe' and the crack that is already mentioned is not working correctly. Follow instructions at the end of the file before adding applications to the shell, if it does not work. This can be done with the following steps: For mac users, open a shell window and navigate to the main folder that contains cracked programs; open the folder 'Cracked' by double clicking it. Next, click the menu button (the 'triangle' icon) and select 'Preferences'; now we are going to add a cracked program to the shell. You can do so by opening the application 'Bartender', it is very similar to the OS X app called Finder (right click > Get Info). In the right pane you will have some options, you can find the one that says 'Open with' and choose 'Add' and locate the application in another place. Now we can select where we want to put the cracked program (see image below), and then click 'OK'. When you click OK in 'Bartender', the program will be in the proper folder. To activate the crack inside the file, we must follow these steps: If the program is not opened, it must be opened, first. Look for it in the MacOS, search for it using the search bar located at the top, if you are not familiar you can select 'Open Terminal' and write 'cd ~/Library/Application Support/SteamApps/common/Elden Ring&&/home/matthew/.local/share/Steam/win32/.steam/ubuntu12_32/Steam Client/steam-runtime/2036/bin/ Click on it and if the file named 'mod_quota.zip' has a '.zip' extension, move it to the desktop. Next, click 'Send' and open it. Continue with the next steps. Drag
