Hex Rays Arm Decompiler Crackedinstmanksl I'm giving away the Crack version of this Hex Rays Arm Decompiler Crackedinstmanksl.Q: Rails (3.2.1) call background job from controller In my application I have a user model and a company model. Every company has one user. I would like to save the relation as soon as the company is created and then fire a job that sends a mail to the user when the company is created. I have followed the documentation of the following link But when I try to access the User controller in the rake task the path to the user is wrong. In the console of the server I get the following error: Failures: > User Load (1.1ms) SELECT "users".* FROM "users" WHERE "users"."id" = 1 LIMIT 1 ActiveJob::DeserializationError - could not find/load class "User" Does anyone know how to fix this? I have trouble to understand the documentation and how it works in practice. Regards PS: I have the code below class UserRegistrationsController user.id) ActionMailer::Base.deliveries.clear UserMailer.user_notification(user).deliver end end class Company
