Logbook is a tool for keeping a log of the last events which have happened on a computer. Logbook can record the time, date, current program, username and the process that is executed, as well as the information about the interaction of the user with the program, including mouse clicks, keystrokes, or the clicks on buttons. Logbook is a simple tool for recording and archiving the activities of a computer system or the user. It is a very useful information for analysis of a system or a system with a user. Create a list of the last events, along with time, date, the name of the window that was the focus of interaction, the name of the file that was open, the name of the application that was running when the file was opened, the name of the command that was executed, along with arguments, or the name of the image file that was displayed. The history of the events can be displayed as a list. Logbook can be started by pressing the Logbook button in the system menu or by pressing Logbook from the window's context menu. Logbook can display system events and system information when a user runs it. The application has a user interface that allows recording of data. Logbook is a powerful application that enables you to track even the smallest user activity on your computer. Logbook stores information about the last events, such as Google Apps Script is a relatively new and rapidly growing type of programming script. Google Apps Script allows you to use the power of JavaScript scripts, while having the security and reliability of the Google system behind you. Google Apps Script is JavaScript script language that has many advantages over static languages like Java and C. Google Apps Script is a type of programming script, which is built by Google and allows you to build your own web applications and make them interactive with many Google services. Google Apps Script can be used to interact with the Google service, such as the Google maps, Google spreadsheet, Google database, Google speech-to-text, and many others. You can use Google Apps Script to create web applications using familiar web programming and many JavaScript concepts, like iterative looping, while giving you the flexibility and safety of the Google service behind you. Google Apps Script is based on the most popular language for the web: JavaScript. This means that you can easily learn the basics of the language for the first Google App Script projects. The application

KEYMACRO is a powerful and easy to use programming and text utility for Windows. With it's help you can change any window's title, and also allows to add and edit application shortcuts to the Windows desktop. Keymaster is a unique utility for Windows that allows you to change the title of any window. You can use it to change the window's name, icon, taskbar button, desktop icon or to add new desktop shortcuts. Keymaster is an open-source utility and it's source code is available at Keymaster Features: \* Allows to change the window's name \* It allows to add or remove the Windows taskbar buttons and changes the icons in the Windows taskbar and Windows desktop \* It allows to change the window's title \* It allows to add or remove the Windows desktop shortcuts \* You can use it to easily create shortcuts on the desktop \* It allows you to add new icons to the Windows taskbar \* It allows to define shortcut keys for the Window's taskbar buttons \* It allows to add new shortcuts to the Windows desktop \* It allows you to change the icon of any icon \* It allows you to change the icon of any application \* It allows you to change the icon of any printer \* It allows you to change the icon of any CD/DVD drive \* You can add any file to any shortcut \* You can disable or enable the shortcut \* It allows you to remove any shortcuts \* It allows you to reset the shortcuts to the original settings \* It allows you to remove shortcut buttons from the Windows taskbar \* It allows you to change the desktop icon color \* It allows you to change the titlebar text color \* It allows you to change the tooltip text color \* It allows you to change the tooltip background color \* It allows you to change the font color of tooltip text \* It allows you to change the font size of tooltip text \* It allows you to modify tooltip text \* It allows you to change the tooltip background color \* It allows you to add any additional items to the windows titlebar \* It allows you to change the window's icon \* It allows you to change the window's icon color \* It allows you to change the icon of any application \* It 2edc1e01e8

Logbook is an application designed for those who are planning on buying a car, or those who already have one and want to keep track of the numerous costs that a car involves and the types of expenses that their car entails on a monthly basis. The application was designed to provide a complete solution for recording all these costs, helping the user avoid wasting money for the purchase of tickets, paying gas, insurance, maintaining their car, etc. Logbook provides users with a dynamic interface that allows them to easily enter the costs of garage time, refueling, parking, taxes, tickets, maintenance, etc. It offers the means to define driver's car details and maintenance costs for specific vehicles. Its interface is provided with a modern and elegant layout that is clear and allows users to register and manage all the different types of costs with ease. The application's interface can be resized and the Logbook's controls are laid out in a clean and pleasant layout. It is important to mention that the interface does not recognize the custom size of the screen and it will always start maximized, meaning that users will have to drag it to their desktop and then move it to a more efficient part of the space. Logbook features a dynamic and customizable interface that allows users to easily register their cars and drivers, monitor and keep track of all the car-related expenses, as well as generate monthly, daily, or hourly reports. The application will permit them to analyze and compare monthly, daily and hourly expenses and find numerous features, from reports that show the expenses spent on particular costs, to the analysis of certain expenses made by individual car details. This simple but useful app allows you to add and edit values to various settings, like color of the fonts, fonts or icons. Once you are done, just re-open the app and everything will be up-to-date. This is a fantastic app for those who are frustrated with the limited number of editing options in stock Android devices. You can control and edit:

- Homescreen
- App Widgets
- Wallpapers
- Launcher
- Icons
- Sounds
- Fonts
- Stickers
- Wallpaper settings
- Theme settings

You can also use the color and font settings to make the fonts look different and unique. You can also set it up to have a higher quality wallpaper for a better effect. Please note that you cannot edit the lockscreen. The best part is that you will have to uninstall
