I was told my articles will be too technical for most people, when i read my first article i am surprised how many people actually understand my personal critique. I have been using Lightroom for ten years, these are my thoughts after upgrading to version 5.2.0.0: Importing is faster, but not by much. Exporting to a new location is marginally faster, but requires memory. The new Calibrate panel to correct make-up errors is quick and easy, but has no undo, so I need to do it more than I needed to in the past. The basic adjustments in Exposure, Light, Contrast, and Shadows no longer use a radial gradient to determine the effects of each histogram adjustment. Adobe has changed this to a pattern. So, unlike Photoshop, Lightroom's adjustments are more consistent for a given brightness level, but the effects are not as visual as in Photoshop. When importing, LR defaults to a memory buffer of 64MB, which is adequate for most Media import, but sometimes goes too high. It has less RAM than Photoshop, which I used to do a lot of photo editing in, and I needed Photoshop to do all my work. As I mentioned in the last article, optimizing the system is key, and now that they have gone to 64 bit, I will have more RAM available to do it. Thanks for the review in the last issue, kind of interesting to read about performance issues for version 3 and 5.0. If you don't bother to submit a site that much why don't you plan to leave the company and join the Apple team! Although it's not related to this article, I would also recommend going to the nearest Apple store, instead of using Adobe CC presented by third party websites. Who knows what you get, as there are 3 different version available. Many people would like to continue importing photos and other data into Lightroom as the main photo management tool, but after upgrading to version 5.2 (not the new 6.0 version yet) my experience was like in Photoshop — too many clicks, and too much time in making all possible adjustments. It's maybe something like big blocks of work in Photoshop that can be reversed, but Lightroom has no Toggle undo. Sometimes, yes, an image was so copied in Lightroom that it became a big block in FotoMagico or Photoshop — but the object was cut. In this case, it was easier to do it again in Photoshop, than to examine the changes made in Lightroom. In addition, the new Crop tool doesn't cut the border as it should. I hope that Adobe will correct this. They say that the button introduced with version 5.2 is not a toggle, but when I created a new LR project with this button, it was a lock. Bugs and features must be there for years? (In this case) Even during the development of this version. What is the logic behind this, can we get round rhe this? In the new version, we can't use direct Linked files: photos and frames. And with the new version, in my opinion, they rhe performance of the program too slow. Perhaps LR 6.0 (it's so hard to believe, that Adobe didn't plan something further with this version. I know) will be better? Anyway, in the future, I dren't download LR(CC) to my computer, I will look at your articles first. Thank you so much, and have a good day!

We're excited to bring this new app to the masses as a preview of what's to come in 2020. With the same great performance, feature set, and app quality you've come to expect from

Photoshop, the app brings all the power of Photoshop directly to the point where you take your photos. The Photoshop Mobile app on your smartphone or tablet seamlessly matches the workflow, tools, and creative experiences you're familiar with in Photoshop for desktop use. You can feel like you're on your desktop when it makes sense to use a desktop app, but extra features and things like mobile connectivity make sense when it's convenient. With Photoshop Mobile, you can transform any image right from the iPhone XS or later and create professional-quality photo editing apps with just a few swipes. The animations in the app are smooth and responsive and help you to go from shooting to editing quickly, helping you to get to the next step. To make it even more convenient to use your iPhone or iPad for photo editing, the app includes two new editing workflows, Performance and Markup workflows, which let you apply the same edits across multiple photos and directly on edits in the app. "Guides" are illustrations, graphics, or shapes that can be placed into your image and will stay in the same place. Often used for grids or illustrations, guides can be used to build and position grids on an image. Guides are useful for creating a clean and straight line. The Natural Blending option blends two pixels together the way we can as people. For example, a brighter-colored pixel is blended with the pixel right up against it. This can be an excellent way to use transparency to blend sections of the original image into a second image. Natural Blending is a great tool for creating seamless panoramas. There is also a Blend Layers tool that can blend two or more layers together. This is great to create a seamless gradient or background image. 933d7f57e6
