If you start the Lightroom 5.2 version first, it will get unusable, if you import only one folder at the time, and if you want to import 2000 image one by one, it gets too slow even with a modern computer. This means that the problem isn't in the software, its that everybody else is using it together with the adobe.com and an open internet connection (perfect for Virus and spywares, more free than a new phone from adobe...)

Rich As a technical writer, I would appreciate you to admit that most of product reviews says useless crap about the product. The one you posted here, tells that you had a great experience with the software. I therefore would be glad if you could do it two more times, but just admit that you couldn't work with the software. It should be easy to repeat a review within three months and that's about it.

Alex from Arechura Adobe Photoshop review. From what I think, why do you even buy it?! You can get exactly the same result from free software.

There is, however, one chance to get a copy of the 2017 Premium Creative Suite 7 on the phone. Because I lost track of my review app earlier in the year, I receive an email notifying me of the available giveaway. It worked like this: in July, the original Creative Suite 7 was \$119, then in October that price went to \$169 and this month, it is \$119 again. However, to receive a review copy of Creative Suite 7, you must pay for the upgrade (\$139 for five years of cloud services). That means, if you are not inclined to give up your annual Adobe Premium Cloud for a FREE version of 2017, you'll just have to wait another year. What a sad come-down!

Although over-the-shoulder use is possible, you can also work in file space on your own computer, and then synchronize with your Creative Cloud desktop immediately after the editing is complete. It's also possible to export your images directly to other desktop programs such as
