You can modify dark areas to make bright areas brighter. You can tweak highlights and shadows to make your photo more fun. You can apply the Rodeo effect. You can cast soft shadows. You can set levels. You can use your iPad Pro's pen. You can shoot and edit under water. You can access the macro scene. You can do a lot. Adobe Photoshop CC now gives you more tools and features with Advanced CC, so you're able to take advantage of motion and work smarter by focusing on what's important. Starting with Simple Tools and Responsive Design you're able to get straight to work more efficiently without having to dig through menus and tool palettes to find the tools you need. And with Smart Preview & Arc Wrap you can process large batches of images right from the panel, so you can get the job done faster and more effortlessly. The lightroom 4.2 was the first update to Lightroom that I had wanted to review. I made an account on day 1 of Lightroom 4 to join the beta program. After about 3 weeks waiting, the beta program ended, but I received the full Lightroom 4.2 upgrade within a week of registering. I liked the update, but the so called \"new way\" to organize your Lightroom application is not easily learned by many people and I still use the previous lightroom application to import images.

Adobe replaced its legacy plug-in distribution model with a new module-based technology for both Premiere Pro and Photoshop. The change to module-based distribution makes it easier for developers to work on individual modules and easier for users to find what they need in the application's features. This innovative new module-based technology also makes it easier to develop new features because it makes it an order of magnitude less difficult to have a developer build a completely new feature in a module. The modular architecture also separates out components into discrete tools, making it easier to move features into separate modules and extend features or patch them in a more efficient way. Users can now tell Photoshop to "share for review" any changes made to a file with another person, who will be able to quickly view changes on the file without installing the full Photoshop Creative Cloud offering. This means two people now can work together on an image simultaneously, without the need to send a file over lunch. Users can also share a project for review using this feature, as well, as Adobe has created a new CLI command and a UI control for doing this. When artists share images for review, they can mark the file as being created in the last 24 hours, three days, or even three months for the designers (or later, for developers to review the code). A preview tool is always available for each version of the file, as well as the original version to enable the reviewer to compare the changes made in real-time. When the reviewer clicks the Require Change button, Photoshop automatically streamlines the review process, instantly bringing all the shared changes into a single diff view. This frees up the reviewer to make changes incrementally, view the entire diff in the UI, or directly modify the image without the review process.
